At USP, we welcome about 200 undergraduates each year, from seven different faculties in NUS. We provide them with an integrated academic and residential college environment within the NUS University Town. Being small means that every voice is heard, every interaction is meaningful, learning is active and rigorous, and pursuit of ideas is endless. Our students initiate and do numerous things locally and overseas from their first year to their fourth year. They are excited about the interweaving of ideas, and in this excitement, they are strongly supported by professors, staff and alumni. We are small, but our aim is big: Shaping independent, adaptable thinkers and doers who will make an impact in the world.

Imagine immersing yourself in a close-knit community within the vast NUS, joining an intimate group of open-minded individuals who share a passion to do amazing things, who celebrate diversity of ideas, and who are always curious about learning and existing connections. These individuals encourage one another to present different opinions and perspectives on just about anything, inside and outside the classroom. The University Scholars Programme (USP) is that community.

The National University of Singapore (NUS) is a big place with boundless opportunities and lots of room for exploration. It is truly a wondrous place to be. Imagine immersing yourself in a close-knit community within the wider NUS – joining an intimate group of open-minded individuals who share a passion to do amazing things, who celebrate diversity of ideas, and who are always curious about learning and existing connections. These individuals encourage one another to present different opinions and perspectives on just about anything, inside and outside the classroom. The University Scholars Programme (USP) is that community.

Explore what USP has to offer within the wider NUS.
Joining USP means joining a community that is curious, critical, courageous and engaged.

Find out about our innovative curriculum, diverse global opportunities, and transformative learning environment in the following pages.

Go to usp.sg for more details and updates of exciting programmes and developments in our community.

We are adventurous in thought. We pursue a broad range of intellectual interests and are ready to make connections across different domains.

We are willing to consider differing points of view, unafraid to face challenges and to act upon ideas.

We are intellectually rigorous, deeply reflective and value a humility born of awareness of the limitations of our own knowledge.

We extend the frontiers of knowledge in energetic and creative ways, and are prepared to navigate and help shape a complex world in a responsible way.
USP Curriculum

We offer a broad-based curriculum that balances both breadth and depth to give students an interdisciplinary education. Interdisciplinary means more than simply taking modules in different areas of study. An interdisciplinary education fundamentally changes how we perceive, think about, and understand the world. By examining a subject with knowledge and methods from multiple disciplines, such an approach produces new possibilities for innovation and creation.

Students admitted to USP are concurrently enrolled in 1 of 7 NUS faculties or schools:

- Faculty of Arts and Social Sciences
- Faculty of Engineering
- Faculty of Law
- Faculty of Science
- NUS Business School
- School of Computing
- School of Design and Environment

The average student to faculty ratio in the USP classroom is 15:1. Learning in USP takes place in small classes that rely on strong interpersonal interaction and vigorous discussions.

In this environment, all students are encouraged to share their perspectives and thoughts, and to learn through questioning their own assumptions and exposing themselves to new and competing ideas.

My major and USP: 70% + 30%

USP students earn 70% of their academic credits in their home faculty, and 30% in USP. The total workload is the same as that of other NUS undergraduates.
A USP student reads 12 USP modules in four years, and these modules are taken in three structured tiers, namely Foundation Tier, Inquiry Tier, and Reflection Tier. Each USP module is carefully designed to be truly interdisciplinary. Classes in USP are small and intimate, and our students get to choose from a wide range of modules.

### Foundation Tier
Nurture a solid series of skills that will equip students for the interdisciplinary work they will encounter in the subsequent tiers.

### Inquiry Tier
Focus on further developing and expanding the skills and ideas that students encountered in the Foundation modules. Encourage students to generate new and innovative ways to look deeply at complex issues and solve problems.

### Reflection Tier
Builds upon both the broadening of inquiry, and the disciplinary knowledge that students have gained within their own majors by having students reflect on these processes in a single seminar-style module.

---

**Curriculum**

**Foundation Tier**
- Writing and Critical Thinking
- Apocalyptic Cultures
- Civic Discourse in a Fractured World
- Clothing Identities
- Colonialism and Cosmopolitanism
- Conditions of Happiness

**Inquiry Tier**
- Humanities and Social Sciences
  - Arts of Memory, Public Recollection & Memory
  - Engaging and Building Communities
  - Ethics and the Environment
  - From Lab to Stage: Writing the Science Play
  - Language, Cognition and Culture
  - Managing Cultural Difference: Theorising the Sydney Model
  - Multiculturalism in Singapore and its Contexted Meanings
  - Nationalism and the Arts
  - Representing War
  - Singapore: The Making of a Nation
  - Singaporean Nostalgia
  - The Interhersogical Indians of Contemporary Singapore
  - The Pre-Framed Concept of “Cabinet”
  - Theatre and the World
  - Transitional Justice and War Crime Trials: Case Studies from Singapore and Asia

**Reflection Tier**
- Critical Reflection

**Foundation Modules**
- 3 Modules

**Inquiry Modules**
- 8 Modules

**Reflection Module**
- 1 Module

---

A student must do at least 1, but no more than 3 Independent Study Modules (ISMs)
Foundation Tier

The first tier consists of three Foundation modules that emphasise critical thinking, close reading and engagement with texts, quantitative reasoning, and a contextual understanding of the major ideas and questions in the Arts and the Sciences. The goal of Foundation modules is to encourage students to challenge assumptions and ask critical questions across disciplines.

The three Foundation modules are conceptualised by dedicated USP professors, as follows:

1. Writing and Critical Thinking
   This helps students to read and think critically, to engage with texts rather than simply repeating them, and to write persuasively.

2. Quantitative Reasoning Foundation
   Students gain an appreciation that, for many questions or issues, a quantitative analysis can provide the insight and clarity that complement and go beyond what might be gained through a qualitative approach.

3. University Scholars Seminar
   Spanning two semesters, students learn to situate the major ideas, thinkers and paradigm shifts in the history of intellectual inquiry. We survey the different attempts at addressing key questions in the pursuit of intellectual thought.

An example of a Foundation module

What do popular expressions of the apocalypse tell us about who we are, what we fear, and how we choose to consume culture?

Apocalyptic themes dominate contemporary expressions of popular culture, revealing highly imaginative and frightful ways that the end of the world might come about as well as the many scenarios of the life beyond. But our fascination with these themes tell us that they are influential not because they are works of fiction but they have something important to say about our political and social realities. How then do apocalyptic cultures mirror changing historical anxieties over the different agents of destruction and the people who have access to them? What do they reveal about consumers especially in a transnational context? For example, how can apocalyptic cinema from the US become transplanted in a place like Singapore?

Through looking at the themes and objectives of apocalyptic cultures, the teaching professor for this module aims to achieve the larger purpose of fostering intellectual consciousness among students so that they can ask important and significant questions, construct responses to those questions, and ultimately express them in the written form.
The second tier consists of eight Inquiry modules in either the Humanities and Social Sciences domain or the Sciences and Technologies domain. Students will read modules distributed evenly between the two domains, for a broad intellectual and disciplinary base. The overall goal of the second tier is to deepen students’ understanding of intellectual connections outside of their disciplinary specialisations by way of multidisciplinary inquiry. To create an environment of educational intimacy and collaborative discovery, Inquiry modules take place in small seminars to facilitate meaningful dialogue.

Examples of Inquiry modules

In the Humanities and Social Sciences domain

- UCV2209 The Heterogeneous Indians of Contemporary Singapore

In the Sciences and Technologies domain

- UBM2201 Hormesis and Life

**The Humanities and Social Sciences domain**

- Literary Studies
- Visual and Performing Arts
- Philosophical Inquiries
- Human Behaviour, Society, Economy and Polity
- Civilisational Studies

**The Sciences and Technologies domain**

- Life Sciences
- Nature’s Laws
- Quantitative Reasoning
- Biological and Medical Technologies
- Physical and Chemical Technologies
- Information Technologies

**Inquiry Tier**

“What doesn’t kill you makes you stronger”, is a popularised saying that instills optimism and courage. But is there any scientific basis that undergird this principle? And if so, how far can we push this idea?

“Hormesis” is the scientific term that captures the essence of these rhetorics. This module characterises hormesis and addresses the biological mechanisms behind it using classical examples of stresses that are capable of invoking both a good and a bad response. For example, why does mechanical stress break a bone and strengthen another? Why does a bug infect one individual but immunise another? Based on this exposition of the concept, the teaching professor hopes to generate a platform for an intellectual discourse and deep dialogue on the potential analogies across domains even as far-flung as sociology and psychology. Ultimately, he aims to create a new perspective for stress, and to challenge students to consider the merits of managing stress rather than avoiding it.

What makes an Indian, and just how heterogeneous is the Indian community in contemporary Singapore?

This module provides for a multifaceted understanding of the heterogeneous Indian community in contemporary Singapore. The reality and identity of an Indian cultural mosaic, which is influenced and exemplified by colonial and post-colonial history, migratory patterns, geographical proximity to India, Singapore’s foreign relations, centrality of religion, religion, localised food culture, diverse traditions and rituals, differing languages, varying of organisations and networks, among others, underpins the essence of multicultural identity in Singapore. The teaching professor will combine theory and empirics in studying and discussing these various issues. Field trips, sampling of food alongside the observance of rituals, and dialogues with policymakers and stakeholders are the principal highlights of this module.
Reflection Tier

This third tier consists of a single module, the Senior Seminar. It is designed to bring students together towards the end of their degree to reflect on the conditions of their own disciplinary knowledge and the assumptions developed in disciplinary training, and to cultivate a broader interdisciplinary framework to approach discourse and ideas with.

This module prepares students for intellectual life beyond the university by asking them to reflect on how their undergraduate education can be brought to bear on the complex political, social, economic, and existential problems of the “wider world” they will be confronting and participating in upon graduation. As a capstone of the USP education, this module builds on the entirety of USP’s curricular and co-curriculum experiences by getting students to consciously make connections among these experiences.

Whether these connections are across disciplines, learning activities, or academic and broader social concerns, the aim is for students to draw new and deeper insights into what they have learnt at university and how they can continue to do so beyond the training ground of the university.
USP International Programmes are designed to give students the opportunity to explore interdisciplinary modes of thinking and understanding beyond the conventional classroom setting in Singapore, and relate and translate their learning to the wider world. From their first year in USP, students are encouraged to become active participants in this experience, whether by proposing and organizing international programmes, or by demonstrating leadership skills and resourcefulness throughout.

In doing so, we hope to foster an environment wherein students, with support from professors and administrative staff, initiate and take ownership of endeavours for their personal and professional development.

- USP Student Exchange Programmes (SEP)
- Joint Degree Programmes, Double Degree Programmes
- Short-Term Programmes, Study Programmes, Conferences, Module Study Trips
Joint Degree Programmes, Double Degree Programmes

Joint Degree Programmes
• NUS-Australian National University, Australia
Double Degree Programmes
• NUS-Sciences Po, France
• NUS-Waseda University, Japan

Short-Term Programmes

Study Programmes
• Buddhism-in-Asia, various countries
• Builders Connect, Philippines
• Civilisation of Iran, Iran
• Comparative Cultural Rhetoric Academy, France
• Forgotten Communities, Malaysia
• Inter-Civilisational Dialogue, Turkey
• Internship Exchange with SP Jain Institute of Management & Research, India
• Study Trip for Engagement and Enrichment (STEER), various countries
• U21 Social Entrepreneur Corps, Ecuador

Conferences
• Asian Undergraduate Summit, various countries
• AUN and ASEAN+3 Education Forum & Young Speakers’ Contest, various countries
• /quoteleft.001Desert Nights, Rising Stars’ Writers Conference, USA
• Global Next Leaders Forum, Japan
• Pan-Asian Student Forum, various countries (Seoul, Beijing, Hong Kong, Tokyo)
• Princeton Diplomatic Invitational, USA
• Tufts University EPIIC International Symposium, USA

Module Study Trips
• Participating Social Development in Southeast Asia, Thailand
• State-Minority Relations in Southeast Asia, Laos and Thailand
• Theatre and the World, Indonesia

*Please refer to usp.nus.edu.sg/nus-sciencespo for details of the application procedures and various deadlines.
Asia Undergraduate Summit

"USP's student-centric culture has empowered me to head projects like the Asian Undergraduate Summit. Being the Chairperson of this regional venture has imparted invaluable skills such as effective communication, team coordination and stakeholder management just to name a few. The lessons learnt from this project go well beyond my classroom, equipping me for life after university."

Raag Sudha Sanjay

Political Science + USP

The Asian Undergraduate Summit is a student-led, student-run international conference. The Summit aims to bring together undergraduates of diverse disciplines from Asia, and provide them with the opportunity to engage in meaningful academic, cultural and social exchange.

Civilisation of Iran

"The most impactful part of the trip was being able to engage and interact with our counterparts from the University of Tehran. The engaging discussions on Multiculturalism in both Iran and Singapore made for a rewarding experience."

Muhammad Syamil B Maulod

Mechanical Engineering + USP

This is a study programme to Iran, led by a professor. It aims to acquaint students with various aspects of Iranian civilisation, with particular emphasis on the relationship between Iran and the West in the areas of philosophy, literature, and the social sciences. Students have the opportunity to interact with Iranian professors and students at the University of Tehran.

Forgotten Communities

"It's a challenge to interact with the local people given the language barrier. I had to get out of my comfort zone and be very open to new ideas and beliefs, feelings, and emotions. It's amazing how quickly we bonded with everyone, including the UTAR students.

S Sivapriya

History + USP

This is a student-planned field trip to study "New Villages" in Malaysia. Students engage in ethnographic research and contribute to mapping the community assets of these rural "New Villages". Students get to interact with locals and professors at the University of Kuala Lumpur (UKL), guided by USP professors.

Builders Connect

"Learning first hand from the management team as well as the individuals who benefited from the NGOs made learning more interactive and applicable to daily life."

Tan Jing Yi

Mechanical Engineering + USP

This is a development-work learning programme to the Philippines. Initiated by USP students, it aims to achieve learning and service through development work research and fieldwork. Students partner with, and study the works of International Charity Organisations (ICOs) or Non-Governmental Organisations (NGOs). Driven by their passion, students gain multidisciplinary insights into the complex challenges of poverty alleviation, talent synergy, social entrepreneurship, global hunger, child education, and environmental sustainability. Some have progressed to interning or working at the ICOS.

Student Exchange Programmes

"My stint in Turkey has made me appreciate and embrace cultures I'd never ever imagined being immersed in. Through my exchange at Boğaziçi University, I found genuine empathy, and openness for people as people."

Khng Lanyuan Desiree

English Literature + USP

USP students are strongly encouraged to participate in Student Exchange Programmes (SEPs) at USP. SEPs provide opportunities for students to explore different perspectives and alternative approaches to learn the subjects they study, experience new cultures and different ways of living, meet friends from around the world, and travel to different places.

Joint Degree Programmes with the ANU

"People at the ANU are really easy to work with and you can call your professors by their first name. Everything is at a graduate level. It’s how willing one is to ask questions and propose ideas."

Matthais Wong Meng Yan

History + USP

USP offers joint degree programmes (JDPs) with the Australian National University (ANU) for USP students in the Faculty of Science, and the other for USP students in the Faculty of Arts and Social Sciences. USP students spend three semesters at the ANU. They explore research streams early and interact closely with the research culture at the ANU. By stepping out of Singapore, they can enhance their intellectual, leadership, and personal potential in exciting and unpredictable ways.
Cinnamon College (USP) is no ordinary campus residence. It is where USP students forge exciting possibilities and create precious memories.

Our college is located in NUS University Town. Within this unique space, students develop a sense of belonging through living and learning together, making full use of the facilities and resources. They take classes at the learn labs adjacent to the college block, they share meals with peers, professors and alumni, they participate in sports and hold events in the hall, and they have numerous thoughtful discussions, both formal and informal, in the Master's Commons, floor lounges, suites and our common lounge – fondly known as Chatterbox.

Two years of residential living in their first year and a second year of choice (with the option to extend beyond), giving them the freedom and flexibility to build unique experiences.

Our dining hall serves 2 meals a day (breakfast and dinner; 6 days in a week) where students and professors catch up, share meals and have thoughtful discussions.

"When I think USP, I think Home. It’s hard to pinpoint what makes me gravitate towards USP, but perhaps it’s the warmth of the community that lies at the heart of USP. That treasure trove of warm memories that we share in Cinnamon College, the late night study sessions, the mind-blowing Avalon games, the heartfelt heart-to-hearts, the impassioned intellectual discussions and that occasional surprise gift at our door if NUS is the body of my University life, USP is my heart and soul."

Jeremy Jee (Computer Science + USP)
Our community is close-knit, socially engaged, highly intellectual and a lot of fun! We are a community of students, professors, staff and alumni of diverse backgrounds, disciplines and interests. But students are also belonging to and are represented by the University Scholars Club (USC), representing the student community in academic and social welfare matters. USC actively seeks to empower students to lead impactful projects and stimulate critical discussions in the community. Both residential and non-residential students initiate and participate in an extensive range of intellectual, community engagement, and social programmes and projects.

**Brainfood+**
A not-for-credit chance to learn, Brainfood+ provides a fun dimension for students to explore beyond formal learning interests. Led by volunteer USP professors, small groups of students meet weekly to tackle a central question, using a book to drive inquiry forward.

**USP Polymaths**
USP Polymaths is a student interest group that invites speakers to share compelling ideas with the wider USP community using the Pecha Kucha format – 20 slides for 20 seconds each. Previous sessions have spanned a wide range of topics that reflect the diverse disciplines and interests in USP, from the principles of gravity to the defense of feminism in Singapore.

**The Sessions**
The Sessions ignites student-led discussions within and beyond the USP community by serving as a platform to host interesting guests who enrich conversations on various topics. Students select topics and guests based on community suggestions and plan for a range of discussion formats beyond conventional dialogues.

**Connect Tuition**
A pro-bono mentoring and tuition programme initiated in 2004, Connect Tuition pairs more than 40 USP students with underprivileged children aged 8 to 16 years living in the Casa Clementi and Dover housing estates. With a mission to foster community ties, support positive youth development and provide conducive learning environments for the mentees, more than 200 children have benefitted.

**USP Productions**
Active since 2006, USP Productions is a platform for students to showcase their theatrical talents and skills in annual productions. Committed to the development and production of quality student-driven theatre, USP Productions explores issues deeply relevant to Singaporean society at large.

**We Will Dance**
We Will Dance is Singapore’s first 10-hour charity dance marathon that was organised in 2013 by USP alumni. To date, USP students have attracted over 1,000 participants and raised over $50,000 for charitable institutions focused on education. We Will Dance brings together its beneficiaries to groove with its participants to the beats of K-pop, zumba and hip hop.
Adjusting to a new environment in university can be daunting. Different parts of the USP community come together to support each other through this transition and across the undergraduate experience.

From formal advising avenues to ground-up initiatives, help is always available in USP – empowering everyone to have the best experience they can.

Academic Support
Senior USP students act as Peer Mentors, providing personalised academic guidance to freshmen. Freshmen are also assigned professors as Academic Advisors.

At the Writing and Quantitative Reasoning Centres, experienced senior students assist their peers with their assignments.

Social and Psychological Support
USP students belong to one of six Houses, which act as welfare and support networks connecting them across batches.

First-line Counselling Care and Support is available to all USP students.

Student Interest Groups
- Love, USP advocates for mental health awareness within the USP community.
- Gender Collective is an inclusive and safe space to discuss issues relating to privilege and marginalised groups.

Residential Support
Designated Freshmen Floors help freshmen build support networks with peers going through similar experiences.

Each neighbourhood of 3 floors is cared for by 1 Residential Professor and 3 student Residential Assistants.

Financial Support
Bursaries and Grants
- U-Town Bursaries and USP Grants help financially challenged students defray the cost of staying in our college.

Scholarships
- U-Town Scholarships and USP Scholarships are available for outstanding students.
I enrolled in NUS with the intention of learning what it takes to earn my keep in Science (bread and butter), but got so much more in the process. USP offered “teasers” from other faculties and disciplines which included modules on writing, business, civilisation, engineering, chemistry and physics. I will always remember how we deconstructed consumerism and constructed gadgets in the classes. As a science student, I had the chance to build a Tesla coil (unsuccessfully and shorted the circuit to the engineering lab!). USP allowed for interaction with students from other faculties – it increased my exposure to ideas as people have different ways of solving the same problem. These experiences shaped my love for learning.

I learnt through USP the many skills that complement research; this helps a lot in my current work on breast cancer. Suffice it to say, I would be a different person if not for my time at NUS and USP.

Dr Li was conferred the 2017 Young Scientist Award at the President’s Science and Technology Awards (PSTA) organised by the Agency for Science, Technology and Research (A*STAR) for her research on mammographic density and its impact on women’s health. She also received a National Research Foundation (NRF) Early Career Award in 2017 and Assistant Professor of NUS Yong Loo Lin School of Medicine.

My experience in USP’s alumnus to take intellectual dips in various pools of knowledge – from the logic underlying mathematics to the history of Islam across societies somehow helped my mind instinctively see issues or problems in different angles, and to be comfortable to read across disciplines in order to solve problems. For example, in Chapter W, the problem that we are trying to solve is not just the problem that villages have no light. This issue is tied intricately with the issue of rural supply chain, engineering quality of products, the gender dimension in poverty, the role of economic incentives in our programmes, and the formal and informal structures of power in rural societies.

Apart from reading Law and being a part of USP, I was also active with the NUS Jazz Band and sang at gigs as a freelancer. Time management is really important. You can make the most of limited time by knowing what is important to you and what to spend it on.

Mohamed Fairoz Bin Ahmad
Sociology + USP, Class of 2006
Founder and Executive Director, Chapter W

My experience in USP’s alumnus to take intellectual dips in various pools of knowledge – from the logic underlying mathematics to the history of Islam across societies somehow helped my mind instinctively see issues or problems in different angles, and to be comfortable to read across disciplines in order to solve problems. For example, in Chapter W, the problem that we are trying to solve is not just the problem that villages have no light. Mohamed Fairoz Bin Ahmad
Sociology + USP, Class of 2006
Founder and Executive Director, Chapter W
Shaun Lin
Executive Director, UBS Wealth Business + USP, Class of 2004

My journey through USP taught me to assimilate large amounts of information across diverse subjects effectively and to find connections between different disciplines that may not be obvious. While Business was my main course of study, through USP I was able to focus on a great number of engineering, aerospace and life sciences courses.

Cross-disciplinary training between business and engineering has enabled me to switch between engineering and business frameworks when solving problems at work. Being able to see things through different lenses helps me develop practical solutions to many of the problems I face for both the client that I was not just an expert in my technical field but also in communication and interaction. The other class is Dr Yew Kong Leong’s “Asianism and Singapore”. It made me appreciate how valuable each perspective could be, and how we need to attend to the conceptual premises and frames behind a work. USP has helped lay the foundation for my scholarship and gradual growth academically. It sharpened my thinking and ability to read and write more critically, early on in my education.

Chia Su Yuen
Co-founder and CEO, MomoCentral.com
Computer Science + USP, Class of 2010

That helped in my negotiations and dealings with my team at work, to communicate and interact with them on a more meaningful level. I even had a chance to do a public speaking engagement where I presented some of the research and analysis that I have done for MomoCentral. At MomoCentral.com, we work with over 450 talents worldwide, and serve more than 50,000 people. Critical Thinking – to a marketing project, while I bounced off ideas on a national-wide electric car network with someone taking classes on urban planning at the Lee Kuan Yew School of Public Policy. One of the best experiences I have had in USP is the inter-mixing of different disciplines. It was not uncommon to discuss something like bioethics over breakfast [at the college dining hall] with friends who were sociologists, biochemists or neuroscientists.

USP classes opened my mind, enabling and constantly reminding me to observe and think about the world beyond the technical. I recall last USP seminar which impacted me most. Associate Professor Don Favareau’s “Ethnomethodology: Semiotics of Everyday Life: a view at human conversations, dialogues, pauses, conversion nuances, body language, etc. That helped in my negotiations and dealings with clients, team leader, and even with myself. The other class is Dr Yew Kong Leong’s “Asianism and Singapore”. It made me appreciate how valuable each perspective could be, and how we need to attend to the conceptual premises and frames behind a work. USP has helped lay the foundation for my scholarship and gradual growth academically. It sharpened my thinking and ability to read and write more critically, early on in my education.

One of the best experiences I have had in USP is the inter-mixing of different disciplines. It was not uncommon to discuss something like bioethics over breakfast [at the college dining hall] with friends who were sociologists, biochemists or neuroscientists. I even had a chance to discuss with a USP faculty member whose training is in a mix of History, arts and sociology, Associate Professor Ryan, on her take on my engineering design project – I saw my friend apply historical techniques from the USP Foundation module – Writing and Critical Thinking – to a marketing project, while I bounced off ideas on a national-wide electric car network with someone taking classes on urban planning at the Lee Kuan Yew School of Public Policy.

I represented USP [International Programme at the] Personal Interaction & Crisis Simulation Conference in Princeton University and sought to bring an engineer’s perspective to international relations. My take on carbon emissions and STEM education became valuable as the person I talked to was working in the environmental field. I am thankful to have received positive feedback for inspiring students to adopt an rigorous and critical approach to the things they observe or can learn from on their own. I am glad to have received positive feedback for inspiring students to adopt an rigorous and critical approach to the things they observe or can learn from on their own. I am glad to have received positive feedback for inspiring students to adopt an rigorous and critical approach to the things they observe or can learn from on their own. It was truly unique to USP and continues to influence my university education.

Dr Varun Soni
Assistant Professor, Department of Architecture, National University of Singapore
Architecture + USP, Class of 2002

One of the best experiences I have had in USP is the inter-mixing of different disciplines. It was not uncommon to discuss something like bioethics over breakfast [at the college dining hall] with friends who were sociologists, biochemists or neuroscientists. I am thankful to have received positive feedback for inspiring students to adopt an rigorous and critical approach to the things they observe or can learn from on their own. I am glad to have received positive feedback for inspiring students to adopt an rigorous and critical approach to the things they observe or can learn from on their own. It was truly unique to USP and continues to influence my university education.

Dr Imran bin Faadzil
Assistant Professor, Department of Architecture, National University of Singapore
Architecture + USP, Class of 2002

One of the best experiences I have had in USP is the inter-mixing of different disciplines. It was not uncommon to discuss something like bioethics over breakfast [at the college dining hall] with friends who were sociologists, biochemists or neuroscientists. I even had a chance to discuss with a USP faculty member whose training is in a mix of History, arts and sociology, Associate Professor Ryan, on her take on my engineering design project – I saw my friend apply historical techniques from the USP Foundation module – Writing and Critical Thinking – to a marketing project, while I bounced off ideas on a national-wide electric car network with someone taking classes on urban planning at the Lee Kuan Yew School of Public Policy.

I represented USP [International Programme at the] Personal Interaction & Crisis Simulation Conference in Princeton University and sought to bring an engineer’s perspective to international relations. My take on carbon emissions and STEM education became valuable as the person I talked to was working in the environmental field. I am thankful to have received positive feedback for inspiring students to adopt an rigorous and critical approach to the things they observe or can learn from on their own. Career Services

Our USP Career Services is a satellite career unit that supports our students in their career needs. At every stage of their career preparation in USP from when they first enter as freshmen to their graduation as they transit into working life, we are committed to support the students to become career-ready by offering a range of services. Big things come in small packages. This is how we do it:

Career Planning
Recognising the importance of early career planning, we help students to discover their career inclination which is aligned with their life purpose, passion and competencies. This includes self-awareness of students’ personality profile, discovery of career interest and alignment with their values which will provide a direction for their career planning.

Career Exploration
To support students in their career exploration (be it the private sector, public sector, non-governmental or non-profit organisations, or be an entrepreneur), we collaborate with industry partners to offer internship opportunities. We also partner with USP alumni to guide students through a mentorship programme.

Career Preparation
We equip students with the relevant competencies in their career preparation by providing a range of services such as career discovery workshop, resume writing workshop, interviewing skills workshop, case interview workshop and assessment centre.

Postgraduate Education
For students who wish to pursue postgraduate studies, our professors provide advice to guide them in their decision-making. We also collaborate with other universities to conduct postgraduate education talks.

USP is committed to supporting students at every stage of their career process, right from their very first year.
We welcome about 200 of the most curious and brightest minds to join us each year.

If you are a prospective student wishing to apply to us, please submit your USP application* at the same time as your NUS application. Each application is processed separately.

USP application is done via the USP Online Application Form. Please go to usp.sg/admissions where you will be guided on how to complete and submit your application. We will consider you based on your academic potential, essay, personal statement and an interview.

You will receive full consideration when you apply to both NUS and USP by the respective closing dates (see Application Timeline above). Please check for exact closing dates at usp.sg/admissions. If you are unable to meet the USP closing date applicable to you, please contact us to enquire on possibilities available.
